

GOLD STANDARD INSTALLATION

CINDERELLA FREEDOM TOILET- PP FLUE

Over 70% of toilet issues are the direct result of faulty installation.

Faults caused by a faulty installation are not covered by the 3 year warranty.

Max 5 metres (straight) ventpipes.

If you have an extractor fan in the bathroom where the toilet is do not turn it on while the toilet is operating as this removes oxygen from the room.

Ensure the gas connection and wiring can be easily disconnected so the toilet can be taken outside for a thorough clean.

A certified LPG gas fitter must install this toilet.
See detailed instruction manual enclosed.

600 MM ABOVE THE ROOF

Important! The pipe must be installed vertically above the roof and extend at least 600 mm above the roof surface.

UV-STABILIZED VENT PIPES

Max 5 metres (straight) vent pipes behind the toilet. **No bends or leaning pipes allowed.**

BEND W/CONDENSATION CONNECTOR

Better airflow, easier installation and cleaning. The option to connect a condensation trap (*indoors installations only*).

AIR INLET

This should stay open to allow a good flow of oxygen.

AIR INLET

Another example how to take in oxygen through the floor from underneath the house.
